

07.6—210 Conversion of exhaust system from national to tourist version

Model year 1977/78

If vehicles are operated for extended periods outside USA/Canada, leaded fuels may damage the catalysts. To prevent such an occurrence, tourist version vehicles are delivered by manufacturer without catalyst.

The workshop personnel (not USA/Canada) will then be able to convert the exhaust system from a national to a tourist version.

If such a vehicle is again returned to USA/Canada, reconversion is required.

1. Removing catalyst

Refer to 07.6—200 item 1—6.

2. Installing exhaust pipe

Exhaust pipe part no. 123 492 26 04

Insert exhaust pipe into plug connections instead of catalyst and slightly tighten plug connection.

For further installation refer to 07.6—200 item 7.

Note: Installation of heat shield panels is eliminated.
